APPLYING #QUANTCRIT PRINCIPLES TO MODEL INTERPRETATION

1) White Supremacy’s Role in Education
SAT used eugenics research as foundation

2) Numbers are not neutral
When we say something is a negative or positive predictor what do we actually mean?

They found a clear link between high prenatal testosterone exposure, indicated by the longer ring finger compared to the index finger, and higher scores on the math SAT. May 22, 2007

3) Use Experiential Knowledge
Qualitative research can help us honor participants’ data

4) Focus on malleable factors
Focus on things you can intervene and change

5) Include variables that talk systemic structure
Focusing only on individual’s characteristics leads to deficit thinking
